Electronic Classrooms

Information Technology Services (ITS) manages four types of electronic classrooms on campus. These are:

- **Presentation Classroom** [1]
- **Collaborative Computer Classroom** [2]
- **Laptop Classroom** [3]
- **Minerva Seminar Room** [4]

A presentation classroom contains a ceiling-mounted data projector, two computers (1 Macintosh, 1 PC), VCR, DVD player (Blu-ray Player in some locations), and a document camera. The computers, VCR, DVD player, and document camera are generally physically located in a lectern at the front of the classroom. We are phasing out 35mm slide projector in the classrooms, if your classroom does not have one please contact x6438 to request one. Additionally, there are connections for laptop computers to connect into the presentation system. These rooms do not have computers for student use.

A collaborative computer classroom has a ceiling-mounted data projector, a computer for the instructor, VCR, DVD player (Blu-ray Player in some locations), and a document camera. There is a connection for laptop computers to use the presentation system. We are phasing out 35mm slide projector in the classrooms, if your classroom does not have one please contact x6438 to request one. A computer classroom has computers for students to use; usually 1 to 4 students per computer. There will only be one platform (PC or Mac) for student use and the instructor's computer will be the same platform as the students.

A laptop classroom has a ceiling-mounted data projector or LCD and a combination DVD/VCR player. There is a connection for a laptop computer. There is no installed computer in the classroom.

Each of the Minerva Houses has a seminar room that is available for both student and faculty use.
